Chat App

This is a chat application built with Next.js and Firebase.

Features

- Real-time messaging
- User authentication
- Responsive design

Prerequisites

Make sure you have the following installed on your development machine:

- Node.js (version 12.0.0 or higher)
- npm (comes with Node.js)
- yarn (optional)

Getting Started

Installation

1. Clone the repository from GitHub.
2. Navigate to the project directory.
3. Install the dependencies using npm or yarn.

Environment Variables

Create a `.env.local` file in the root of your project and add the necessary environment variables for Firebase configuration.

Running the Development Server

To start the development server, use the appropriate command for your package manager.

Building for Production

To create an optimized production build, use the appropriate command for your package manager.

Running in Production Mode

To run the project in production mode, use the appropriate command for your package manager.

Linting

To run the linter, use the appropriate command for your package manager.

Formatting

To format the code, use the appropriate command for your package manager.

Deployment

This project uses GitHub Actions for continuous deployment. The workflow file is located at `.github/workflows/nextjs.yml`.

Learn More

To learn more about Next.js and Firebase, take a look at the following resources:

- Next.js Documentation - learn about Next.js features and API.
- Firebase Documentation - learn about Firebase features and API.
